SUMMARY

Product Manager with 19 years of experience building products end-to-end — from industrial engineering at Volvo to founding and leading my own technology company (Fohat). Consistent track record of driving products from strategy to production: I led the development of a regulated trading platform for the energy sector, ran two ANEEL R&D (P&D) projects from kickoff to delivery, and currently lead the strategy and roadmap for a multi-agent AI system in production. I combine business vision, engineering rigor and technical execution.

EXPERIENCE

Product Manager · Tech Lead — eXmesh · Fohat 2024 — present

- I lead product strategy and architecture for a generative multi-agent AI system in production for the energy sector, with autonomous agents orchestrated via LangGraph and interoperability through MCP (Model Context Protocol).
- Built the RAG (Retrieval Augmented Generation) pipeline powering the agents' knowledge base, including context curation and prompt engineering for specialized tasks.
- Implemented observability and monitoring for LLMs and agents (Langfuse), covering tracing and response quality, with a human-in-the-loop (HITL) layer in the system's governance.
- Defined the product's governance model based on OKRs, with an orchestrator agent responsible for routing and prioritizing demands — one of the agents was the first in the operation to autonomously merge a PR in production.
- End-to-end owner of prioritization, AI architecture decisions and infrastructure trade-offs (GCP: GKE, Vertex AI), with a consultative role presenting results to stakeholders and the company's advisory board.

Innovation Board Advisor — OSINOVA Participações 2022 — 2024

- Member of the Board of Advisors: corporate governance and product strategy advisory, combining traditional-corporate and startup market experience.

Product Lead — eTradeflow · Fohat 2020 — 2022

- Led the build of eTradeflow, a trading environment with Broker and Home Broker terminals: real-time pricing, integrated contracts and compliance.
- Ran two ANEEL R&D (P&D) projects from kickoff to delivery — one for the Home Broker and one for the Terminal Broker — including regulatory scope management and reporting to the agency.

Product Manager — Fohat 2018 — present

- Owned product vision, roadmap and portfolio strategy for Fohat's B2B platforms in the energy market, since the company's founding.

Quality Engineer · Q&CS — Volvo Group Trucks Technology (GTT) 2014 — 2017

- Applied problem-solving methodologies (8D, Ishikawa, 5 Whys, FTA) to contain and root-cause field failures on the D7E, DH12E and D11R engine platforms.
- Used FMEA/DFMEA/PFMEA, SPC (statistical process control) and Weibull reliability analysis in SAS for failure prediction, within IATF 16949, APQP and PPAP processes for technical change management and component release.
- Monitored fleet operator and dealer complaints through Volvo's warranty systems, defining fleet containment actions (service campaigns and recalls) for safety or high-financial-impact failures, working with metallurgy, metrology and electronics labs.
- Acted as the technical focal point between Latin America aftersales and engineering centers in Sweden, France and the US, translating complex technical issues into executive reports for directors and VPs.

Product Development Engineer — Volvo Bus 2010 — 2014

- Managed variants and product structure in Volvo Kola — part numbers, engineering drawing release and electrical variant restriction rules — for Volvo Bus portfolio modularity.
- Developed and validated functional circuit diagrams in Synopsys Saber (voltage drop, current capacity, wire-gauge-to-fuse/relay coordination) and ran electrical harness tests with CANalyzer.
- Modeled 3D harness routing in Catia V5 (EHI module) along the chassis — bend radius, high-temperature zones and dynamic articulation areas — interfacing with structural and powertrain designers to ensure robustness against water ingress, chafing short-circuits and flex fatigue.
- Adapted the multiplexed cabin/chassis electrical architecture across the full Volvo Bus portfolio (urban, coach, articulated and bi-articulated, front- or rear-engine) and took part in Design Reviews with the Sweden headquarters and build-to-print validation with global harness suppliers (APQP/PPAP) for new components and Wiring Standards.
- Completed specialized technical training in electronic braking (EBS) and suspension (ECS) systems for heavy vehicles, deepening expertise in advanced vehicle engineering.

R&D Internship (Stuttgart) · International Internship (China) — Bosch 2007

- Systems engineering in Bosch's R&D labs in Stuttgart; industrial automation at scale in China.

SKILLS

AI / Agents	Multi-agent systems · LangGraph · RAG · MCP (Model Context Protocol) · HITL · Prompt Engineering · Claude (Anthropic) · Claude Agent SDK · Vertex AI · Langfuse (observability)
Cloud / Infra	GCP (GKE, Cloud Run, Cloud SQL, GCS) · Kubernetes · ArgoCD (GitOps) · Redis / Memorystore
Software	Python · TypeScript · Next.js · NestJS · GraphQL · Django · React · PostgreSQL · WebSockets
Product	Product Discovery · Roadmapping · Prioritization · OKRs · Stakeholder Management · Regulatory Governance (ANEEL/CCEE)

EDUCATION

B.Sc. Industrial Electrical Engineering, Electrotechnics — UTFPR (Federal University of Technology – Paraná), 2011
Postgraduate Specialization in Renewable Energy (360h) — UTFPR, 2016–2017 · Capstone: microgrids as integration of distributed photovoltaic generation
MBA, Brazilian Electric Sector — ISAE/FGV (FGV Management), 2016–2018 · coursework and capstone (TCC) completed; program not concluded
Innovation Board Member Certification — Gonew.Community, 2021–2022

LANGUAGES

Portuguese (native) · English (fluent) · Spanish (professional) · German (basic)
