Dear Hiring Team,

I'm a Product Manager and Tech Lead with 19 years of multidisciplinary experience, bridging engineering and software product development — and that combination is exactly what I'd bring to **your company**.

I started as an engineer at Volvo: designing electrical wiring harnesses and vehicle systems at Volvo Bus, then leading quality engineering and field reliability on engine platforms at Volvo Group Trucks Technology — containing safety-critical failures and reporting results directly to directors and VPs.

I carried that technical rigor into software by founding Fohat, where I built eTradeflow, a regulated trading platform for Brazil's energy sector, and ran two ANEEL R&D (P&D) projects from kickoff to delivery.

Today I'm Product Manager and Tech Lead for eXmesh, a multi-agent AI system I specify and architect — combining product strategy, technical architecture (LangGraph, RAG, MCP) and end-to-end execution, always with governance and a human in the loop.

I would welcome the chance to discuss how this combination of engineering, product and technical execution can contribute to **your company**.

Best regards,

Igor Ferreira
