Dear Hiring Team,

My focus today is one thing: making companies AI First. Not by adding a chatbot to a website, but by redesigning how a company operates when AI agents become part of the team — and that is exactly the experience I would bring to **your company**.

Over the last two years I shipped eXmesh to production: a mesh of generative-AI agents running autonomously and in coordination on Google Cloud. A central agent (MUTHUR) receives any demand and distributes work with no human intermediary; a strategist agent (Bishop) holds the organizational memory and detects drift before it becomes a problem; an executor agent (Walter) runs engineering end-to-end and was the first to autonomously merge code into production; specialized sub-swarms cover each business area. I specify, architect and govern — the agents execute.

The most valuable lesson was not technical: autonomy without governance does not scale. Every agent action passes through a Governance Gateway that validates OKRs, mandates and decisions, with a human in the loop. I come from Brazil's regulated energy market (ANEEL/CCEE), where translating business challenges into auditable technical solutions is daily work.

Behind this sit 19 years of building products end-to-end: 7 years at Volvo growing from engineer to product leadership, 8 years founding and operating B2B platforms (Beenx, eTradeflow, eFlowing), and three terms on an innovation advisory board. I combine product vision, an engineer's analytical depth and a founder's business sense — from discovery and strategy to code running in production.

I would welcome the chance to discuss how this experience can accelerate **your company's** AI journey.

Best regards,

Igor Ferreira
